**Project Information (will be posted on GDipHR website for student access)**

**TITLE:** Screening for Intimate Partner Violence in Primary Care

**DESCRIPTION (MAX 500 WORDS):** This project aims to test the feasibility of electronic screening and intervention for intimate partner violence (IPV) in a primary care setting. Previous studies show inconclusive results on the effectiveness of IPV screening. Primary care providers (PCPs) do not often screen for IPV due to lack of training and time. Therefore, electronic screening and an intervention in primary care present an opportunity to increase IPV detection and provide victims with immediate support. Our proposed project will screen patients at WCH Family Practice and Crossroads clinic for IPV. We will email patients a secure link to a survey with screening questions assessing their IPV history and important contextual factors and a follow-up
survey to both patients and PCPs assessing the process of electronic screening and the feasibility of an electronic intervention. The results will be summarized in the patient’s chart with an automatic notification to the PCP for patients that screen positive.

*If human subjects are involved, have the appropriate Research Ethics Board approvals been obtained?*

☐ Yes ☒ No ☐ Application Submitted (Date: ____________)

Will be submitting the REB application by mid-November.

*Do you expect this work will be published within the 20 months?*

☐ Yes ☐ No ☒ Uncertain / Other

**Student Roles & Responsibilities (please be as specific as possible)**

- Work closely with the Proactive, Personalized Decision Support and Self-Management (PPDS) program to assist with the Intimate Partner Violence (IPV) study
- Assist with qualitative and quantitative data collection, data entry, and data management
- Assist with patient recruitment in adherence to study protocols
- Assist with analyses from the findings of this study to inform next steps
- Assist with additional project work on an ad hoc basis

*Indicate who will serve as the student’s direct report for daily oversight (PI, PhD student, technician, etc...)*

Natasha Kithulegoda (RC) and Thivja Sribaskaran (RA)

*Indicate to what extent the student’s research activities could, if necessary, be completed remotely.*

Almost all of the student’s research activities could, if necessary, be completed remotely. Patient recruitment and data collection are all done virtually through the patient’s electronic medical record using OCEAN.
